

Our charity foundation Archa Chantal was starting its way in 1993 by Chantal Poullain – Polívková, french actress living in Prague, to improve on interiors of children hospitals and others medical institutions. Till now more than 22 projects were realized in public medical facilities all around Czech Republic, at the cost of 46.000.000,-CZK.

All tendency of charity foundation Archa – Chantal leads to make a kind place which positively touch the hearts of kids and their psyche. After these games children become the part of magical world. By this game our smallest patients can easily face up to their illness, standing in a hospital, can get rid of their stress, and being without parents is much easier for them. This magical world help to rehabilitation being successful more than we think it is possible.

Individual projects of single ward are designed by artists and architects, including all needs and wishes of those wards. Child psychologists, doctors and nurses usually help us too.

Every new design of our project is original and their realisation is complete – from reconstructions of interiors as a building parts till the smallest details – everything in perfect harmony.

At the beginning it was so difficult enforce the using some nice colors in hospitals. But step by step it started to be easier and our project were founded as a great idea how to help our children to stay in medical centres and don't lose their childhood for this time.

Our fee is not money, but the moments when small patient would like to book his favourite „green“ room for the next therapy, because he likes it the most. Or he likes the playroom with a lots of toys so much, that he doesn't want to go home. That is the real award we can get and that is the sense of our trying to help to our children.
